

## Chem-Metals & Rare Earth

### ■ Aluminum Oxide

**Aluminum Oxide** is white powder with purity of 99.995%, 99.999% (4N5 5N), tasteless, insoluble in water, but soluble in strong base and acid, which is used as analytical reagent, absorbing material, catalyst, abradant, polishing agent and refractory material. Also used for producing sapphire single crystal and laser crystal YAG. Especially, as Al<sub>2</sub>O<sub>3</sub> is with high purity and hardness, it is widely used as ceramic and mill ball.
